

Creating PC PDF Files for The Castle Press

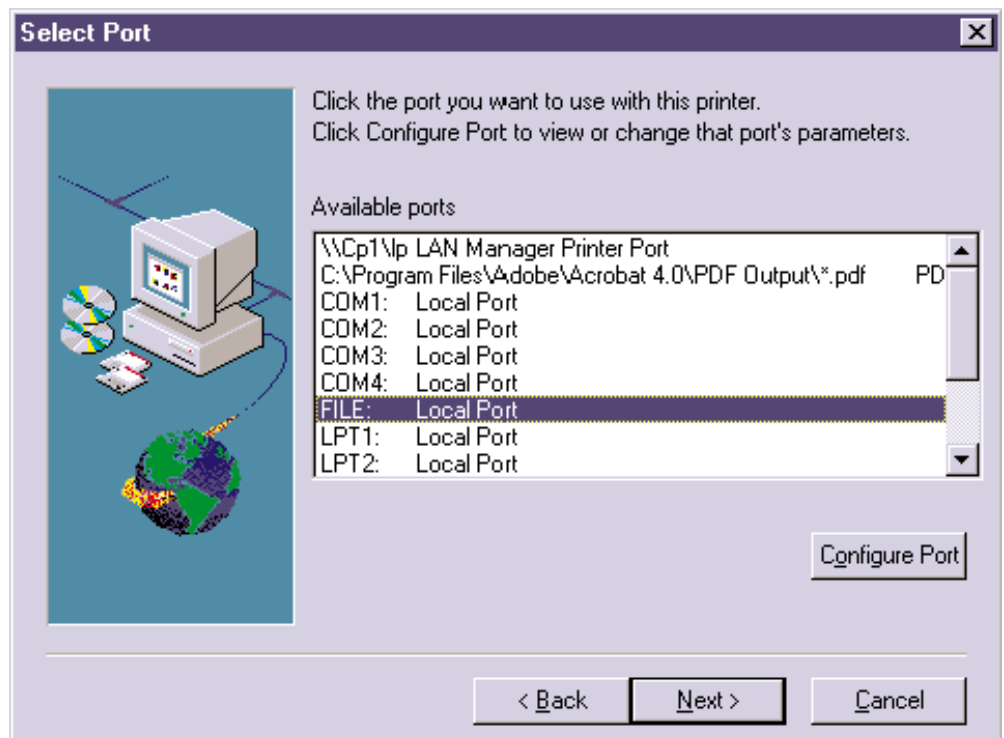

In order to create pdf files for Prinerger, a full version of Adobe Acrobat 4.0 is required.

Create a folder on your computer to download files to. Go to the Castle Press website (www.castlepress.com). Select downloads from the column on the left. Under Litho printing file downloads, select the files appropriate for your operating system. After downloading, unzip the files to the same folder you created.

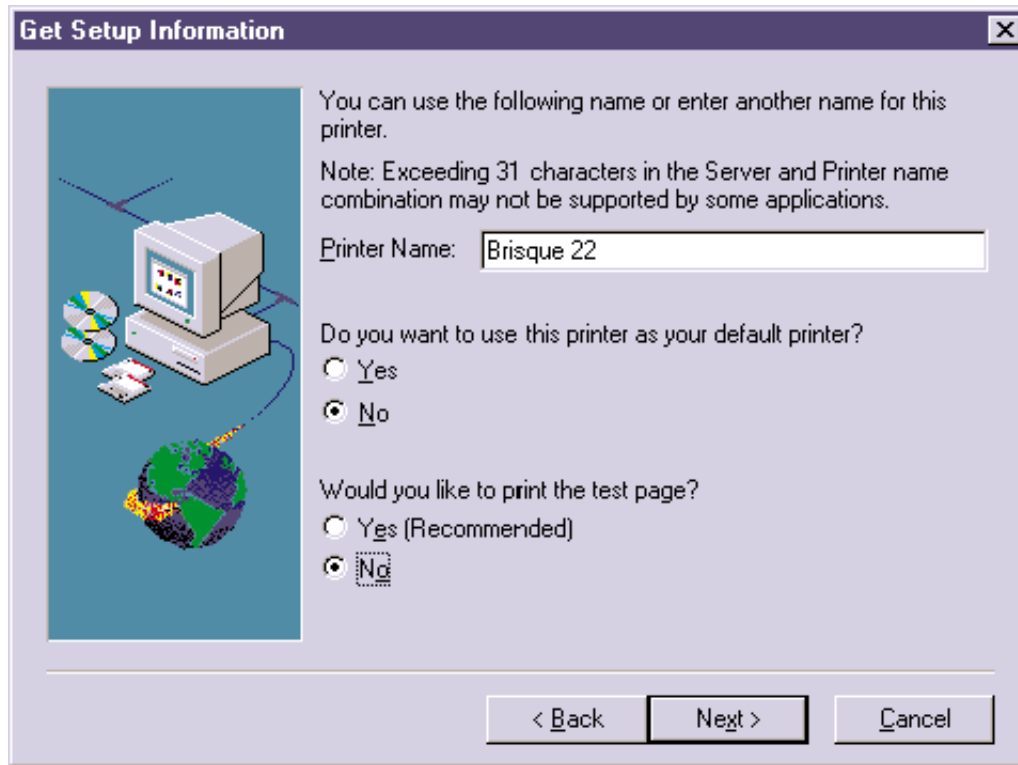

Open the Adobe PS folder and double-click the setup.exe file. This will start your printer installation. In the "Select PPD" window select the Brisque 22. This is included in the downloaded files. Select "Next".

In the "Select Port" window select FILE. Select "Next".

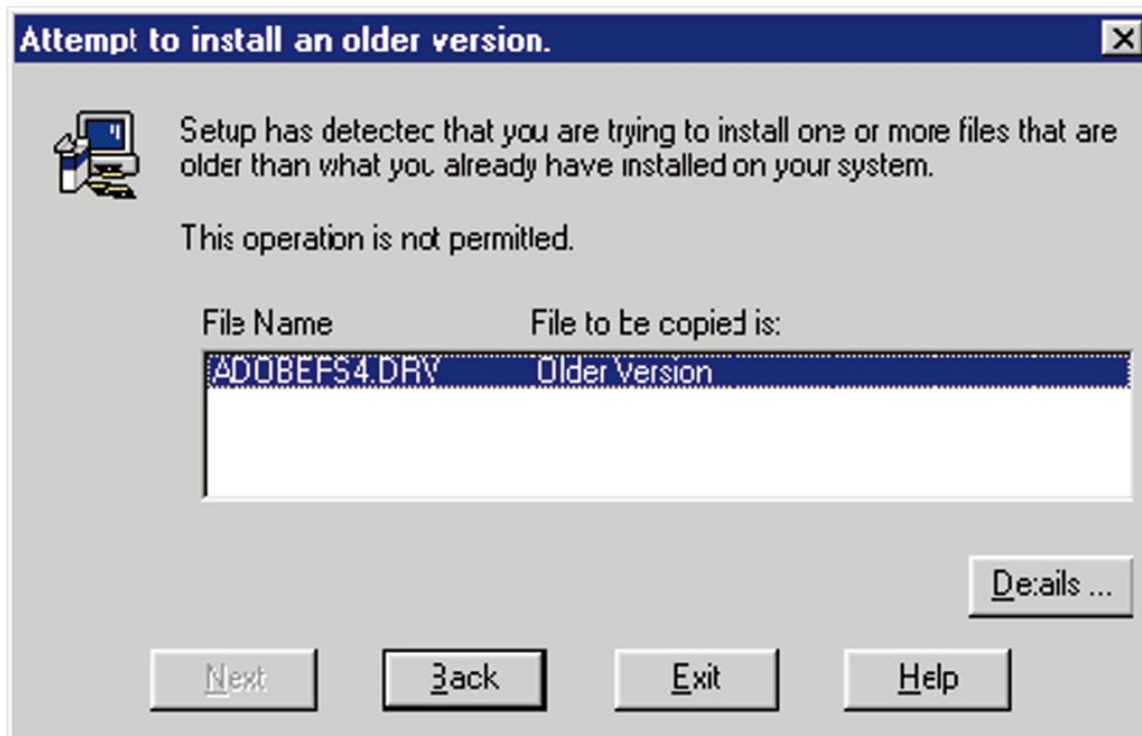

In the "Get Setup Information" window select a name for your printer and select no for the answers to both questions. Select the next button until you are finished. Your printer is now installed

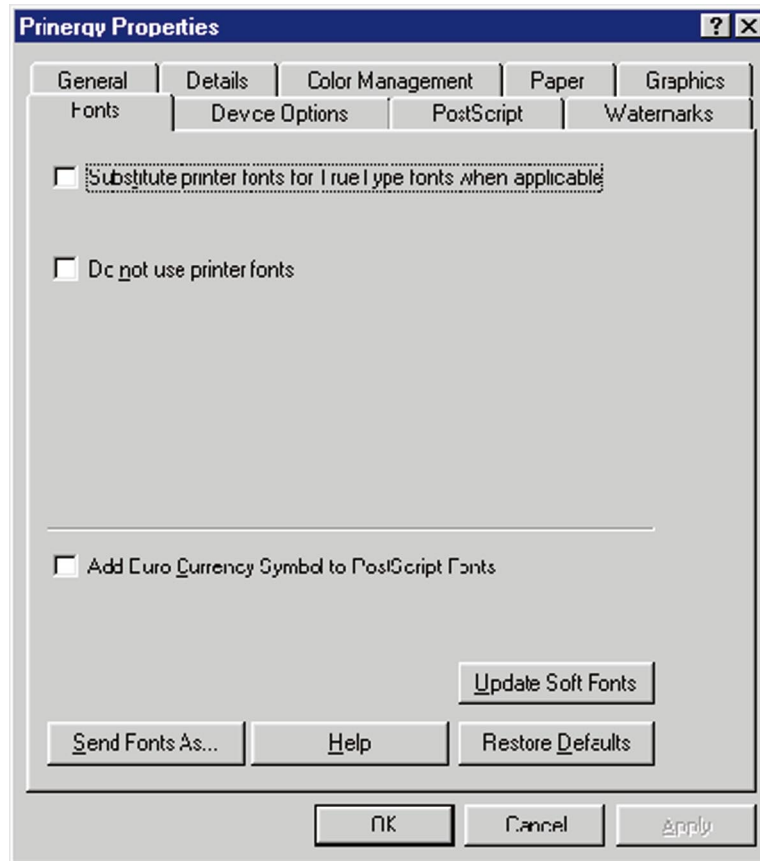

If the following window appears stop the installation of the printer. You have a newer AdobePS on your system. Locate that AdobePS and attach the Brisque 22 to the newer printer driver. If you cannot find the AdobePS, you can go to the Adobe website and download the latest version driver for your operating system. Their web address is:

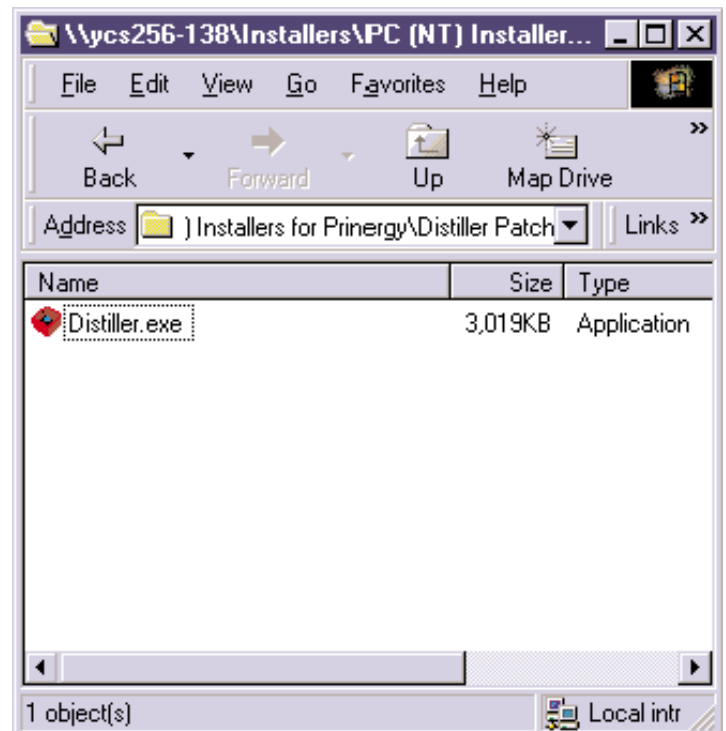

www.adobe.com/support/downloads/pdrvwin.html

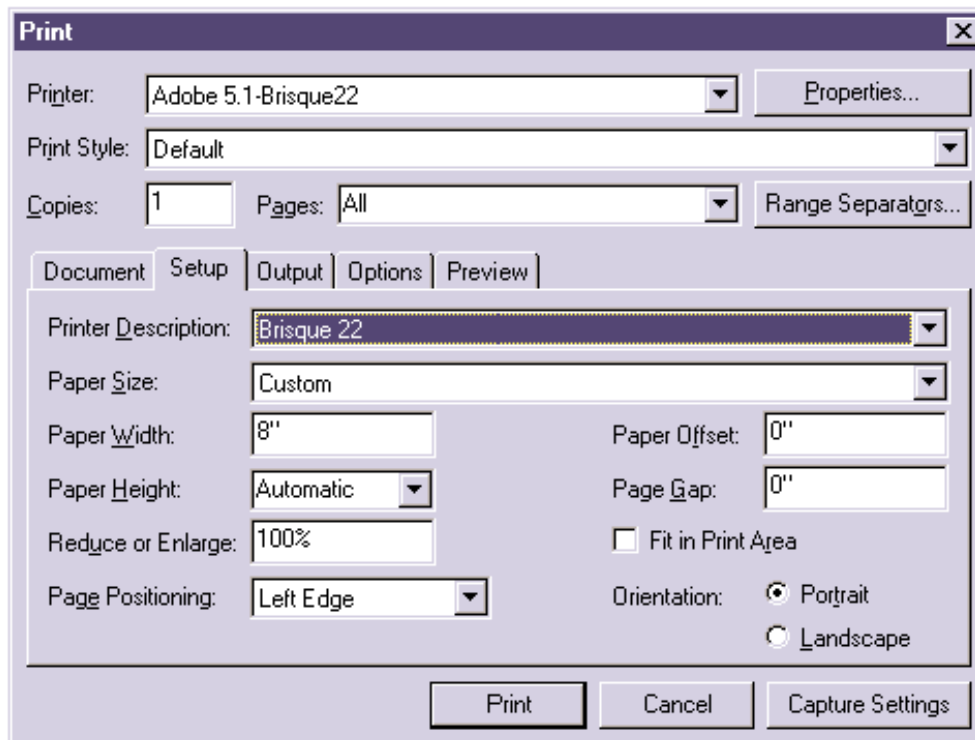

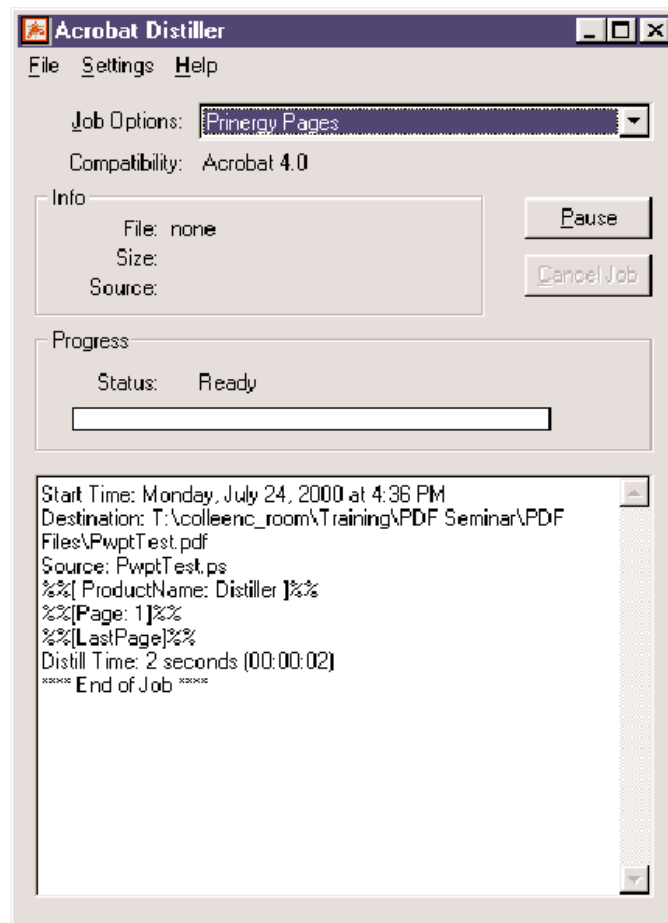

At the end of the installation, you will be asked to configure your printer. Select “Yes”. The only changes you will make in this area is under the fonts tab. Uncheck “Substitute printer fonts for True Type when applicable” and uncheck “Add Euro Currency Symbol to Postscript Fonts”. Select the “Send Fonts As...” button and select to send True Type fonts as outlines.

Next you will install the Distiller Patch. It is included in the files that were downloaded from the website. Open the folder called Distiller Patch and double-click on the Distiller.exe file. Follow the instructions for installation.

Open Acrobat Distiller and in the "Job Options" drop down menu, select Prinergy Pages.

This is a print window from Quark XPress with the printer selected that will be needed to create your post-script and PDF files.
